

## SPECIFICATION

Please replace paragraph [003] with the following.

[003] The advent of the personal computer and modern telecommunications has resulted in millions of computer users communicating with each other around the globe. One of the primary uses of computers today is to send and receive electronic mail (email). Using an email software application, such as GROUPWISE from Novell Corp., LOTUS NOTES from Lotus Development Corp., or OUTLOOK from Microsoft Corp., users send and receive email in private and public networks.

Please replace paragraph [043] with the following.

[043] The client 100 comprises an organizer 210 with task, calendar, and contact components, 210a, 210b, and 210c, respectively. Those skilled in the art will recognize that task component 210a of organizer 210 stores and manages information concerning tasks (e.g., "to do" items), the calendar component 210b stores and manages information concerning time-related events (e.g., meetings, conferences, deadlines, etc.), and contact component 210c stores and manages information concerning contacts (e.g., name, address, telephone number, fax number, etc.). Organizer 210 may be fully functional in the sense that it provides the services of an organizer program executable on a personal computer, such as LOTUS ORGANIZER from Lotus Development Corporation, GROUPWISE from Novell Corporation, or OUTLOOK from Microsoft Corporation. However, for client devices with limited resources (e.g., computing power, memory, etc.), such as palmtop devices, web-enabled telephones, and the like, organizer 210 may contain limited organizer functionality.
